TECHNICAL SKILLS

Backend

Java Spring Boot Spring MVC
Spring Security REST APIs
Microservices Hibernate
JWT Authentication

Database

Oracle SQL IBM DB2 MySQL

Tools

Git Maven Jenkins Postman
Swagger TCS BaNCS

Learning

Kafka (Beginner) AWS Basics
Docker Basics

AI Skills

Prompt Engineering
AI-Assisted Development

EDUCATION

Bachelor of Engineering

Vidya Vardhaka College of Engineering
Mysuru · VTU · 2019

LANGUAGES

Kannada English Telugu

PROFESSIONAL SUMMARY

Java Backend Developer with 4+ years building and supporting core banking systems — including a hands-on deployment to Sweden to help take **Ikano Bank** live on the **TCS BaNCS** platform. Day-to-day, I write backend code, resolve production issues, and use **AI tools** like Windows Copilot and ChatGPT to stay productive — whether that's quickly referencing documentation, drafting technical notes, or thinking through a problem faster. I care about getting things done right — not just done.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services

System Engineer Bengaluru, India

✚ ONSITE · SWEDEN

May 2022 – Present

- Developed and customized backend banking modules for **Ikano Bank, Sweden** on the TCS BaNCS Core Banking platform using Java and Spring Boot.
- Built and maintained RESTful APIs to support integration between core banking systems and external services.
- Handled production support including debugging, root cause analysis (RCA), and incident resolution for banking operations.
- Worked with **Oracle SQL** and **IBM DB2** for data querying, troubleshooting, and validation tasks.
- Used AI tools like **Windows Copilot** and **ChatGPT** to improve day-to-day productivity — referencing documentation, drafting technical notes, and thinking through solutions faster.
- Participated in Go-Live activities onsite in Sweden and supported post-production stabilization over a **six-month deployment**.
- Worked within cross-functional Agile teams across requirement analysis, development, testing, and release cycles.

Infomaze Elite Private Ltd.

Junior Software Developer Mysuru, India

Feb 2021 – Apr 2022

- Developed and maintained APIs to support data exchange and integration across business platforms.
- Worked with clients to understand requirements and convert them into technical solutions alongside the dev team.
- Identified and fixed technical issues to keep applications running within expected performance levels.
- Customized WordPress themes and plugins based on client requirements and design briefs.

PROJECTS

Social Media Backend API

Spring Boot Project

- Developed a backend application using Spring Boot with JWT-based authentication and authorization.
- Implemented user management, post creation, likes, comments, and secure RESTful APIs.
- Designed role-based access control and integrated database operations using JPA/Hibernate.
- Followed layered architecture and exception handling for scalable backend development.

Microservices Architecture Demo

Spring Cloud Project

- Implemented a Microservices architecture using Eureka Service Registry and API Gateway.
- Configured centralized routing and service discovery for inter-service communication.
- Demonstrated dynamic service registration and API request routing between microservices.
- Built the project to understand distributed system concepts and backend service communication.

KEY HIGHLIGHTS

- Banking Domain Expertise:** 3+ years of hands-on experience in core banking systems using TCS BaNCS, working directly on a live European banking implementation.
- International Exposure:** Six-month onsite deployment in Sweden for Go-Live and post-production stabilization of Ikano Bank's core banking platform.
- AI-Augmented Productivity:** Regularly use Windows Copilot and ChatGPT to improve day-to-day efficiency — faster documentation, quicker problem-solving, and better use of available resources.
